## Finding perimeter of 2 dimensional shapes

Find the perimeter of the following.

1.

$$\begin{aligned} \text{Perimeter} &= \text{sum of all the side lengths.} \\ &= (2 + 2 + 2 + 2 + 2 + 2) \text{ in.} \\ &= 12 \text{ in.} \end{aligned}$$

So, the perimeter = 12in.

2.

$$\begin{aligned} \text{Perimeter} &= \text{sum of all the side lengths.} \\ &= (3 + 3 + 3 + 3 + 3) \text{ ft.} \\ &= 15 \text{ ft.} \end{aligned}$$

So, the perimeter = 15ft.

3.

$$\begin{aligned} \text{Perimeter} &= \text{sum of all the side lengths.} \\ &= (6 + 6 + 2 + 2) \text{ cm.} \\ &= 16 \text{ cm.} \end{aligned}$$

So, the perimeter = 16cm.

4.

$$\begin{aligned} \text{Perimeter} &= \text{sum of all the side lengths.} \\ &= (4 + 4 + 4 + 4) \text{ m.} \\ &= 16 \text{ m.} \end{aligned}$$

So, the perimeter = 16m.
