## Count equal groups

Complete the sentences below.

a.

Firstly, count the number of equal groups.

There are 2 equal groups.

Secondly, we count the total number of apples in all the groups.

There are 6 apples in all.

Finally, count the number of apples in each group.

There are 3 apples in each group.

Therefore, the model has 6 apples , divided into 2 equal groups with 3 apples in each group.

b.

The model has 36 cupcakes divided into 4 equal groups with 9 cupcakes in each group.

c.

The model has 16 ice creams divided into 2 equal groups with 8 ice creams in each group.
