Name: Class:

Identify mixed numbers

a. Identify the mixed number of the following figures.

Let's first of all, count the whole figures;

You see that, there are 3 wholes.

Secondly, let's solve the half shaded figure.

Here, we have 2 equal parts with 1 shaded part.

The 1 shaded part is the numerator and the total parts (2) is the denominator.

Finally, let's join the whole number and the fraction to make the mixed number.

The whole number = 3.

The fraction = $\frac{1}{2}$ So, 3 whole and $\frac{1}{2}$ of the other triangle are shaded.Therefore, the mixed number = $3\frac{1}{2}$

b.

The mixed number = $2\frac{5}{7}$

c.

The mixed number = $6\frac{2}{3}$
