

Name: Class:

Write fractions in lowest terms

Reduce the following fractions to its lowest form. (follow the example).

a. $\frac{16}{24} =$

Prime factors of 16 = $2 \times 2 \times 2 \times 2$
 Prime factors of 24 = $2 \times 2 \times 2 \times 3$
 GCF of 16 and 24 = $2 \times 2 \times 2 = 8$

$\frac{16/8}{24/8} = \frac{2}{3}$

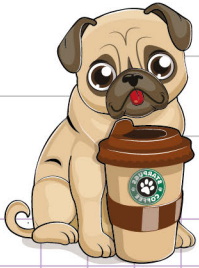

Therefore, 16/24 to its lowest term is 2/3.

b. $\frac{15}{18} =$

c. $\frac{20}{12} =$

d. $\frac{35}{25} =$

Name: Class:

Write fractions in lowest terms

Reduce the following fractions to its lowest form. (follow the example).

$$\text{a. } \frac{16}{24} = \boxed{?}$$

Prime factors of 16 = $2 \times 2 \times 2 \times 2$
 Prime factors of 24 = $2 \times 2 \times 2 \times 3$
 GCF of 16 and 24 = $2 \times 2 \times 2 = 8$

$$\frac{16/8}{24/8} = \frac{2}{3}$$

Therefore, 16/24 to its lowest term is 2/3.

$$\text{b. } \frac{15}{18} = \boxed{?}$$

Prime factors of 15 = 3×5
 Prime factors of 18 = $2 \times 3 \times 3$
 GCF of 15 and 18 = 3

$$\frac{15/3}{18/3} = \frac{5}{6}$$

Therefore, 15/18 to its lowest term is 5/6.

$$\text{c. } \frac{20}{12} = \boxed{?}$$

Prime factors of 20 = $2 \times 2 \times 5$
 Prime factors of 12 = $2 \times 2 \times 3$
 GCF of 20 and 12 = $2 \times 2 = 4$

$$\frac{20/4}{12/4} = \frac{5}{3}$$

Therefore, 20/12 to its lowest term is 5/3.

$$\text{d. } \frac{35}{25} = \boxed{?}$$

Prime factors of 35 = 5×7
 Prime factors of 25 = 5×5
 GCF of 35 and 25 = 5

$$\frac{35/5}{25/5} = \frac{7}{5}$$

Therefore, 35/25 to its lowest term is 7/5.
