Conversion tables-customary units

1. Complete the following table.

Pints	5	8	9	12
Cups	10	16	18	24

The column that is complete shows that, 5 pints is equal to 10 cups.

So, if we divide both numbers by 5 we can see that 1 pint = 2 cups.

That is $5 \text{ pints} \div 5 = 1 \text{ pint}$ and $10 \text{ cups} \div 5 = 2 \text{ cups}$.

Now to convert from pints to cups, multiply by 2 and to convert from cups to pints, divide by 2.

2. Complete the following table.

Quarts	4	32	48	56	64
Gallons	1	8	12	14	16

The column that is complete shows that,

4 quarts is equal to 1 gallon.

That is $4 \text{ quarts} = 1 \text{ gallon}$.

Now, to convert from gallons to quarts, multiply by 4.

And to convert from quarts to gallons, divide by 4.

3. Complete the following table

Pounds	4,000	6,000	8,000	10,000	12,000
Tons	2	3	4	5	6
