

Name: Class:

Identify parallelograms

*A parallelogram is a quadrilateral whose opposite sides are parallel.
A quadrilateral is any polygon with four sides and four angles*

Say whether the following quadrilaterals are parallelograms. *Justify your answer.*

Name: Class:

Identify parallelograms

*A parallelogram is a quadrilateral whose opposite sides are parallel.
A quadrilateral is any polygon with four sides and four angles*

Say whether the following quadrilaterals are parallelograms. Justify your answer

Yes, this quadrilateral is a parallelogram because its opposite sides are parallel.

Yes, this quadrilateral is a parallelogram because its opposite sides are parallel.

No, this quadrilateral is not a parallelogram because not all the opposite sides are parallel.
(it has only 1 pair of parallel sides)

No, this quadrilateral is not a parallelogram because not all the opposite sides are parallel.

Yes, this quadrilateral is a parallelogram because its opposite sides are parallel.
