Identify rhombuses

*A rhombus is a parallelogram with 4 straight sides that are of equal length.*

Identify and state whether each quadrilateral below is a rhombus.

We know that a rhombus has four equal sides of same length.  
Now, let's check to see if the sides of the quadrilateral are equal in length.  
Yes all the sides are equal in length.  
So, **this quadrilateral is a rhombus.**

Let's check to see if the sides of the quadrilateral are equal in length.  
No, not all the sides are equal in length.  
So, **the quadrilateral is not a rhombus.**

We know that a rhombus has four equal sides of the same length.  
Now, let's check to see if the sides of the quadrilateral are equal in length.  
Yes, all the sides are equal in length.  
So, **this quadrilateral is a rhombus.**

Let's check to see if the sides of the quadrilateral are equal in length.  
No, not all the sides are equal in length.  
So, **the quadrilateral is not a rhombus.**
