## Multiply and divide rational numbers

Solve the following operations:

**a.**  $-1.5 \div 0.5 =$

**b.**  $-2 \times \frac{10}{15}$

**c.**  $(-3\frac{2}{5}) \div (-2)$

**d.**  $(-0.5) \div (-0.5)$

Name: ..... Class: .....

## Multiply and divide rational numbers

a.  $-1.5 \div 0.5 =$

$$0.5 \times 10 \mid -1.5 \times 10 = 5 \begin{array}{r} -3 \\ -15 \\ -15 \\ \hline 0 \end{array} = -3$$

Therefore,  $-1.5 \div 0.5 = -3$

b.  $-2 \times \frac{10}{15}$

$$\begin{aligned} -2 \times \frac{10}{15} &= \frac{-2}{1} \times \frac{10}{15} = \frac{-20}{15} \\ &= \frac{-4 \times 5}{3 \times 5} = \frac{-4}{3} = -1\frac{1}{3} \end{aligned}$$

Therefore,  $-2 \times \frac{10}{15} = -1\frac{1}{3}$

c.  $(-3\frac{2}{5}) \div (-2)$

$$\begin{aligned} -3\frac{2}{5} \text{ by } -2 &= -3\frac{2}{5} \div \frac{-2}{1} \\ &= \frac{(-3 \times 5 + 2)}{5} \div \frac{-2}{1} = \frac{-17}{5} \times \frac{-1}{2} \\ &= \frac{-17}{5} \times \frac{-1}{2} = \frac{-17 \times -1}{5 \times 2} = \frac{17}{10} \\ &= \frac{17}{10} = 1\frac{7}{10} \end{aligned}$$

Therefore,  $-3\frac{2}{5} \div -2 = 1\frac{7}{10}$

d.  $(-0.5) \div (-0.5)$

$$\frac{-0.5}{-0.5} = 1$$

Therefore,  $(-0.5) \div (-0.5) = 1$
